About Me

AI-focused Software Engineer (BSc IT) and current AI/ML engineering intern with hands-on experience building and shipping full-stack web and mobile applications using Python, JavaScript (React/React Native), Java, and Flutter. Skilled in machine learning (scikit-learn, gradient boosting), cloud deployment, and CI/CD pipelines; eager to apply practical AI and software engineering expertise to deliver production-ready solutions and accelerate team impact.

WORK EXPERIENCE

Intern - AI/ML engineering | EgoTechWorld (Pvt) Ltd., Mawanella, Kegalle. | July 2026

TECHNICAL SKILLS

Web & Backend Development: Node.js, Express.js, Flask, Spring Boot, React, HTML, CSS

Mobile Development: React Native

Data Science & AI: Python, Scikit-learn, Gradient Boosting, Pandas, NumPy, Agentic AI, Machine Learning

Data & Infrastructure: SQL, MongoDB Atlas, Supabase, Docker, Railway

Core Languages & Tools: Java, JavaScript, Git, GitHub, Postman

SOFT SKILLS • Quick Learning • Teamwork • Adaptability • Problem solving • Communication

INTERESTS • AI/ML engineering • Backend Developer • Data Analyst • ML/Agentic Ops

EDUCATION

Bachelor of Science (Hons) in Information Technology (Specializing in Artificial Intelligence)

Sri Lanka Institute of Information Technology (SLIIT), Malabe | 3rd Year Semester 1

GCE Advanced Level examination | Sri Sumangala National College, Nuwara-Eliya | August 2022

Physics – B | Biology – S | Chemistry – C

PROJECTS

QuickBite: Smart Multi-Canteen Pre-Order System

May 2026 – Completed | • React Native • Node.js • MongoDB • Supabase • Railway

- Full-stack mobile app with real-time pre-order management eliminating canteen queues
- Frontend: Cross-platform app using React Native, Context API, React Navigation, Reanimated animations
- Backend: Node.js/Express RESTful API with MongoDB Atlas and Mongoose ODM
- Cloud Storage: Supabase for images with JWT-based authentication
- Deployment: Railway platform with comprehensive Postman API testing
- Features: Multi-canteen ordering, payment (card/bank), order tracking, feedback system, role-based access

Vehicle-IQ: AI-Powered Second-Hand Vehicle Price Prediction

March 2026 – Completed | • Python • Gradient Boost • Flask • Jupyter • HTML/CSS

- Intelligent machine learning web application predicting second-hand vehicle prices
- ML Model: Gradient Boost regression built in Jupyter Notebook for accurate predictions

- Backend: Flask Python web server to deploy and serve ML model
- Frontend: Responsive HTML/CSS user interface
- Data Pipeline: Feature engineering for vehicle data preprocessing and optimization

Sell&Buy Property: Full Stack Real Estate Platform

May 2025 – Completed | • [Java](#) • [HTML/CSS](#) • [SQL](#)

- Building comprehensive real estate platform with property listings and management
- Advanced search, property management, and user authentication system
- Interactive property browsing interface with seamless user experience

Movie Recommendation System

Personal Project | Completed | [Python](#) • [Scikit-learn](#) • [Pandas](#)

- Recommendation engine using collaborative filtering and content-based filtering techniques
- Implemented algorithms to suggest movies based on user preferences and viewing history
- Demonstrated practical understanding of machine learning concepts in recommendation systems
